it-sa EXPO Congress 2023 in Nuremberg

Meet our security experts live

by ASCONSIT | Published on 28. September 2023

Experience the most important and latest security trends on identities, access and governance.

Find out about the pioneering all-in-one services in IAG management for the best user experience.

The ASCONSIT team will participate in it-sa Expo & Congress (Europe's leading IT security trade show) from October 10-12, 2023 at the Messezentrum Nürnberg .

ASCONSIT Expert topics

Modern Identity & Access Management (IAM) has become an indispensable part of companies' IT security strategy. The trend toward digitization with location-independent access to corporate applications continues unabated, and corporate IT security and employee productivity are more closely intertwined than ever. However, it is not uncommon for compromised login data and access authorizations to serve as a gateway into the corporate network.

This risk can be significantly reduced with the help of professional IAM. By providing centralized management of users and access rights, it lays an important foundation for the protection of corporate data and its assets. In addition, companies benefit from a sustainable streamlining and sharing of administrative processes through **privileged access management (PAM)** and the cross-organizational implementation of security standards. **Single sign-on (SSO)** increases security and is convenient. Companies benefit from the increased security, but also from the man-hours gained from no longer having to invest in password resets.

We place special emphasis on the **realization of IAM projects for SMEs**. Here, ASCONSIT realizes the implementation with manageable efforts in agile project design.

One Identity's Unified Security Platform brings together previously separate processes for managing user permissions, privileged access, authentication and auditing, as well as analytics and compliance metrics. This **prevents the identity fragmentation** that is the root cause of many cybersecurity breaches. Deploying a unified identity security platform closes these gaps, reduces risk, increases efficiency, and ensures governance across the enterprise.

ASCONSIT is a specialized technology partner in the implementation of **front-end and connector development** and offers a practical and **efficient mix of development, consulting, architecture, implementation and support services**. Taking into account the individual initial situation in your company (on-premise, cloud, hybrid IT landscape), we specialize in developing customized solutions. Efficient use of resources and proactive risk management are just as much a matter of course for us as the consideration of company-specific compliance requirements.

ASCONSIT activities it-sa 2023

The ASCONSIT booth this year is in hall 7, **booth number 7-105.** Meet the **ASCONSIT team live** and be inspired by our high quality services.

Last year we presented the first developments of **modern web frontends**. Now we are ready to go and show you what user-friendly IAM interfaces look like. In the ASCONSIT IAM frontend **for One Identity's Identity Manager**, the following scenarios are already mapped by default:

- Create authorization requests
- Requesting external employees
- Overview of all employees
- Approve or reject open authorization requests
- System monitoring

In addition to these standard scenarios, individual processes and workflows can be mapped according to the individual needs of our customers.

How **more efficiency** in the use of **key information for access and governance** is possible with the help of the IAM Frontend will be presented in **our talk** "IAM Frontend - More efficiency through visualization of access governance KPIs" at the English-language forum at it-sa on **Wednesday, 11.10.2023, 11:30 a.m.**, in International **Forum B in Hall 6**.

For **your free ticket**, simply fill out the form below or contact Markus Keller (E-Mail markus.keller@asconsit.com, Telefon +49 4131 / 60 41 68 - 55).

Schedule your personal appointment with ASCONSIT's security experts in advance at:
