

## Success Story

### Upgrade to SAP Identity Management 8.0 - on time and on budget.

The large number of tasks associated with all aspects of day-to-day supply along with development of the infrastructure for a smart city combined with a future-proof, climate-friendly energy supply demands a powerful and secure IT environment. That was the context in which an upgrade of the SAP Identity Management software to Version 8.0 combined with a new a server infrastructure was planned for the Heidelberg municipal energy company in 2020.

The Heidelberg municipal energy company is an energy supplier for electricity including street lighting, gas, heat and household water. The 100% public owned company in Heidelberg also operates swimming baths, several multi-storey car parks and the mountain railways, as well as providing organisational and financial services for the local public transport system in the city.

### Project description

The subject of this project was a technical upgrade of the SAP IdM system on the existing systems of the

Heidelberg municipal energy company involving adaptation of the topology based on a new SAP IdM environment. The starting point for the upgrade was the SAP IdM 7.2 currently in operation, which was updated to **version 8.0, the latest SP**, in the course of the upgrade. An initial round of discussions answered any questions from either side. Based on those insights, the specific requirements of the Heidelberg municipal energy company, and the subsequent discussion of any unresolved questions, an individual concept and the project plan were drawn up for the client.

## **The individual components of the project were**

1. Planning and project management
2. Testing of existing systems
3. Upgrade to SAP IdM version 8.0 and installation of SAP IdM systems on SAP JAVA Application Server (new)
4. Adjustment work on SAP IdM 8 system
5. Testing
6. Go live and hypercare

## **Final observations**

The project was successfully implemented within the defined budget and time frame. The Heidelberg municipal energy company was impressed by the detailed and individually tailored project proposal and the efficient implementation. Aspects particularly worth highlighting are the scenario-specific proposals for sensible hybrid database migration, for example, which enabled minimal-loss data migration.

The technical expertise and competence of the [ASCONSIT staff](#) ensured a high level of implementation accuracy and gave the project team at the Heidelberg municipal energy company the greatest confidence and security.

„We were impressed by the expert technical knowledge of every single ASCONSIT employee. The implementation of the IdM upgrade was completed according to the specifications and entirely to our satisfaction. The ability to look beyond the immediate horizon towards future developments and trends represents a solid basis for future collaboration.”

Project management

## **Experts for IT-Security**

ASCONSIT is a specialist in the planning and implementation of sophisticated IT security environments in identity, authorization and access management, with a special focus on governance, risk management and compliance. ASCONSIT employees are among the pioneers in the SAP market for [SAP Identity](#)

[Management](#), [SAP Access Control \(GRC\)](#) and [Single Sign-On \(SSO\)](#). One Identity (OI) is another important technology partner of ASCONSIT with modular and integrated tools in the IAM and IAG environment: [Identity Manager from One Identity \(OI\)](#), PAM with [Safeguard from One Identity \(OI\)](#) and the [Starling Cloud Platform from One Identity \(OI\)](#).
